INCREASE SAFETY
FOR YOUR STAFF

TourTrac for Guards & Cleaners

The 2R3300 Portable Receiver provides fast and automatic recording of Long Range RFID tags as it passes within range of each tag. The tags are attached to walls or posts, installed in the ground or ceilings for tour recording or attached to any item for inventory recording. The reader records the time each tag was first and last seen with the tag number and automatically uploads this information to a software application whenever the reader is inserted into the 2D3300 charging Docking Station or immediately with the 2R3300 GSM model.

With standard antenna the range is 10 to 15 metres depending on tag type and environment.

The 2R3300 is small in size with rechargeable batteries lasting in excess of 24hrs per charge. Automatic uploading to the central control software when docked into the Protrac iD 2D3300 Docking Station as well as storing over 3000 arrival and departure transactions per tour.

Benefits of the Protrac iD TourTrac System:

- **Up to 30 hours of battery life per charge (18 hours GSM version)**
- **Records the arrival and departure time for each tag**
- **Stores over 3000 transactions for each tour**
- **Auto upload data at the end of each shift when placed in charging rack or in real time with GSM version**
- **Flashing power LED for low battery indication**
- **Flashing tag received LED indication**
- **Manual power on switch**
- **Auto power off after download complete while recharging**
